

## How to Download and Install Sketch-Up Make

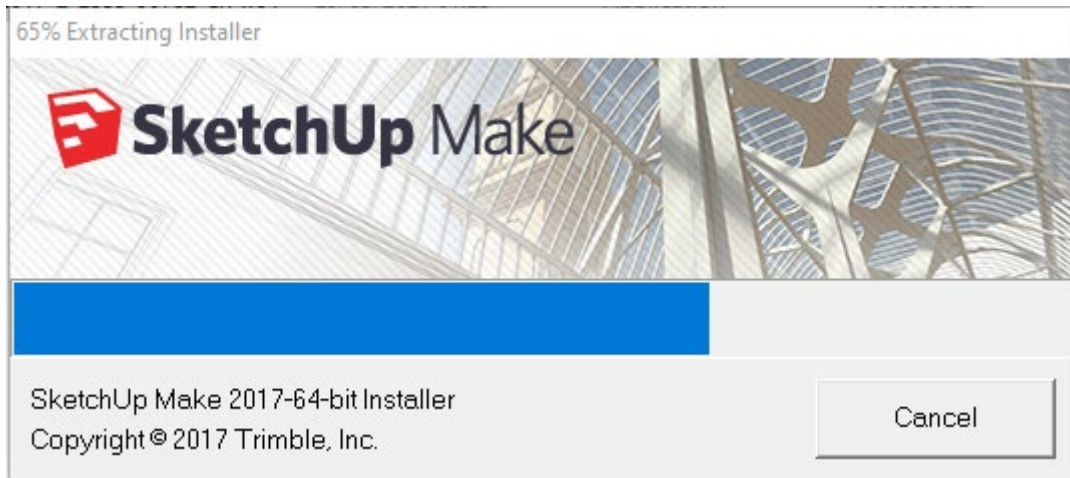

1. You can download Sketch-Up Make from [here...](#) Scroll down the page and click on Sketchup Make 2017 under the BYOD Header.

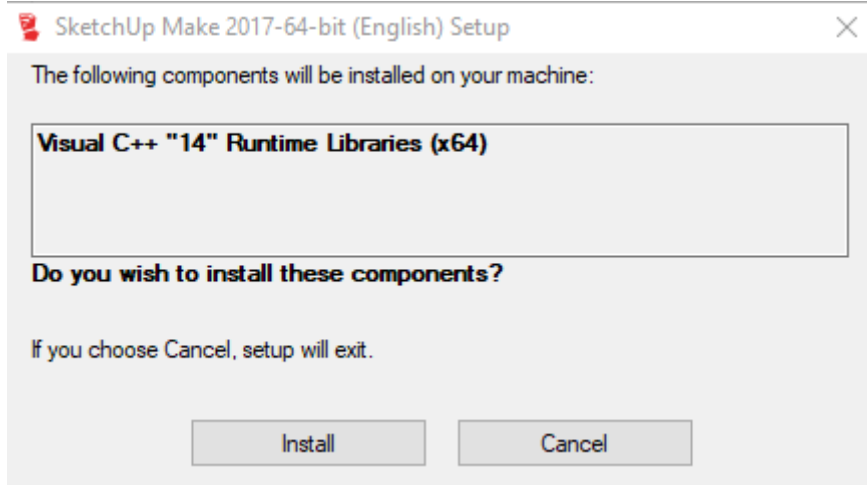

2. This will download the install file (commonly downloads to the downloads folder in the file explorer), locate this install file and simply double click on it to start the installer.

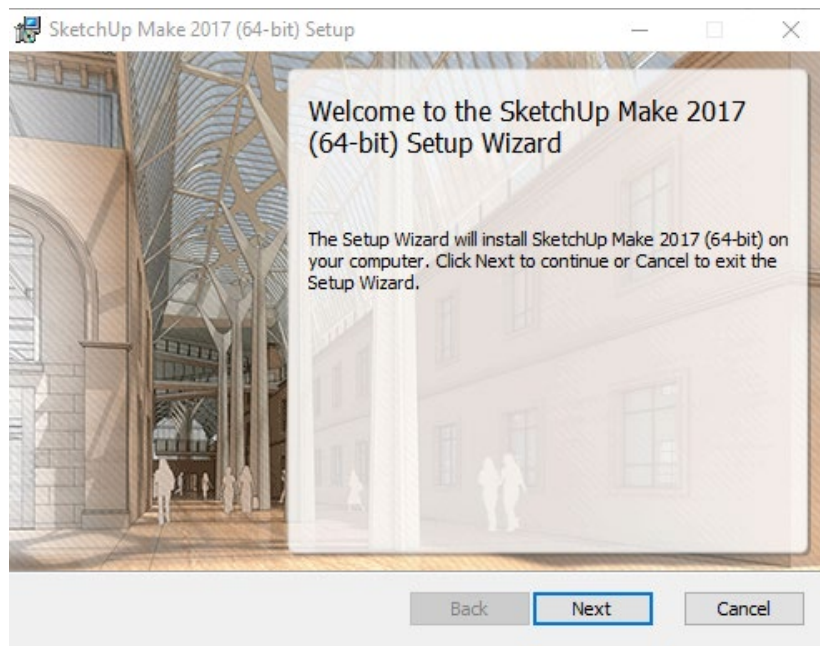

3. You will be asked to allow the file to start installing, click allow and then you will be met with a progress bar (see below image) simply wait for this to finish.

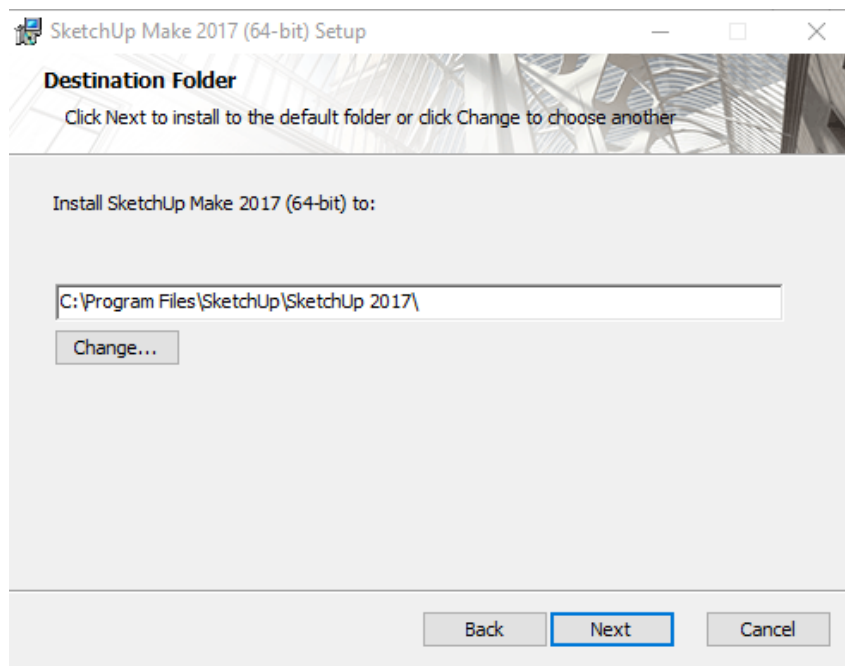

4. You will be asked whether you would like to install additional software that is required to run Sketchup, this is harmless so feel free to click install.

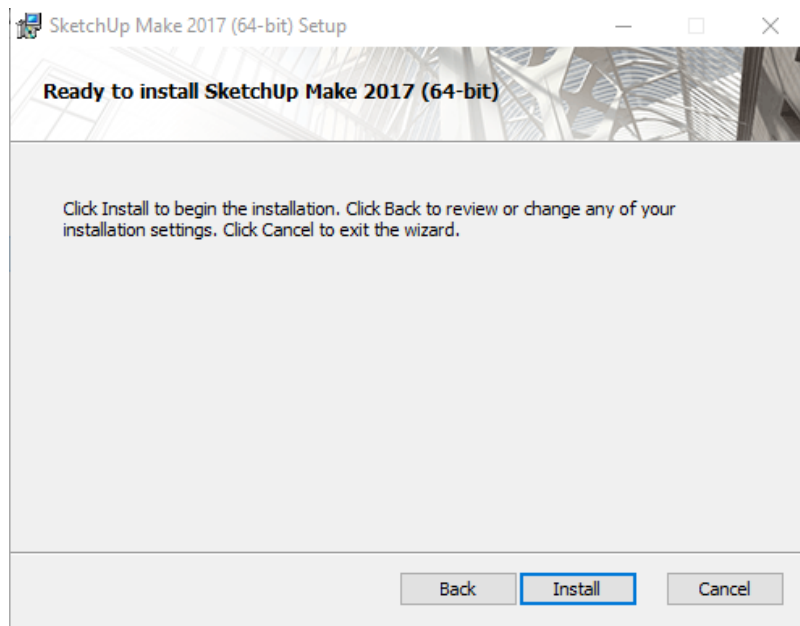

5. Once you have clicked Install, you will be sent to the first page of the Sketchup Make Setup wizard. Do not worry about the out-of-date year, Sketchup Make has since moved online, this version is the last free physical version of the software.

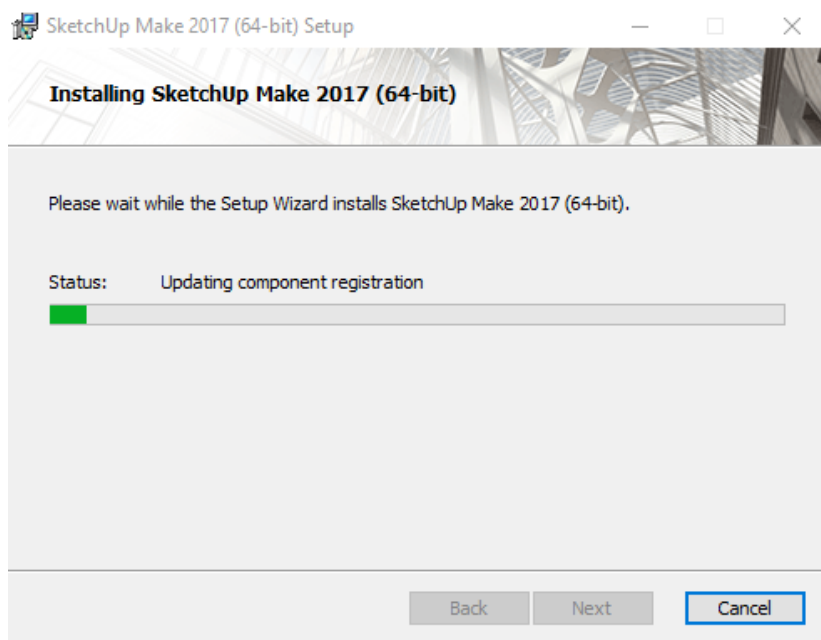

6. On the next window, ensure that the install location is C:\Program Files\SketchUp\Sketchup 2017\ This is the default location, so you will most likely not need to specify the location, if it is correct, then simply click next.

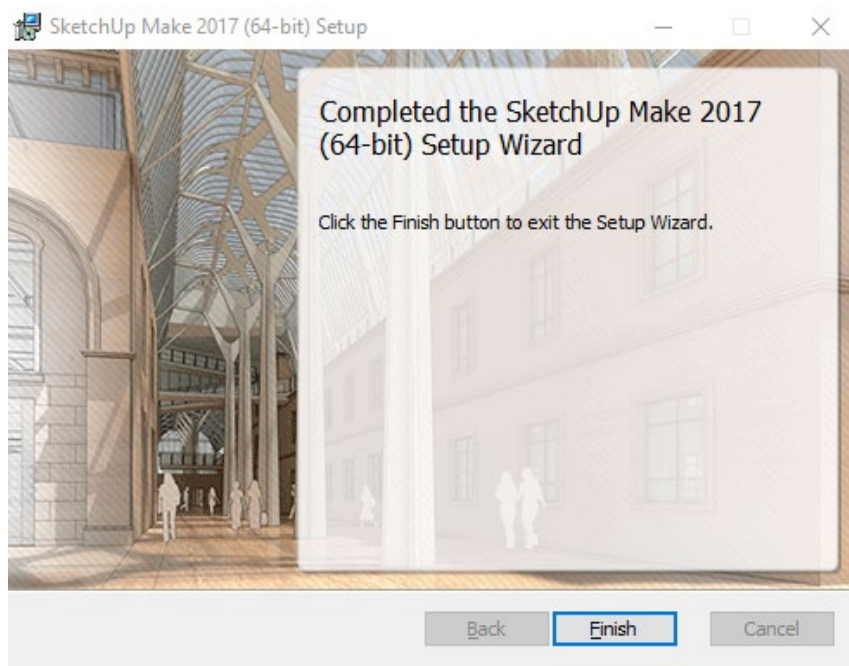

7. On the next window, simply click Install

8. Once you have clicked on the Install button in the previous step, Sketchup will start installing, simply wait for the install to finish.

9. Once the install has finished, you will see the below image, simply click Finish.

If you have any issues with the installation of Sketchup Make or would like to ask us a question, please do not hesitate to contact us on the email below.
